

# FastPak® EXP

An RxWorks™ Suite Solution

The fully expandable system that meets your pharmacy needs, reduces costs, and enables bedside verification.

## **An RxWorks™ Suite Solution**

The FastPak® EXP is one of many RxWorks Suite technology and consulting solutions designed to optimize the medication management process and enable improved patient care, increased cost savings, and market growth opportunities.

## **Unprecedented packaging flexibility**

In support of your health system's BCMA process, the FastPak EXP accommodates any pharmacy's oral solid dispensing needs, with packaging sub units that allow you to easily switch between standard or narrow width: standard width for traditional unit dose and multi-dose packaging; narrow packaging for unit based cabinets and 30-day boxes. The FastPak EXP enables you to expand your capacity onsite, from 128 to 320+ oral solids with Smart Canisters.

## **Smart Canisters speed replenishment and accommodate a large formulary**

Innovative Smart Canisters (optional) can be interchanged quickly. The FastPak EXP automatically detects the canister's contents and updates the medication database, regardless of where the canister is placed inside a designated Smart Drawer. The EXP is ideal for pharmacies serving multiple facilities or pharmacies that need the safety of canister dispensing for more than 320 medications.

## **Saves nursing time**

The FastPak EXP facilitates medication administration with easy-to-open unit dose and multi-dose packaging. The device fosters compliance and convenience because every package can be clearly labeled with drug name, strength and description; and if desired, patient name and administration time.

## **Speed the cart-fill, automated dispensing cabinet or nurse server replenishment process**

The FastPak EXP can automate up to 100% of oral solid prescription medications, which represent the majority of doses in an average hospital pharmacy.

## **Affordable barcoding at the point of care**

Dispensing oral solids with barcodes is a critical first step toward implementing bedside verification. The FastPak EXP, coupled with the optional Barcoding Station, brings you a surprisingly affordable 100% barcoding solution.

# FastPak<sup>®</sup> EXP

An RxWorks<sup>™</sup> Suite Solution

## Expandable oral solid packaging and barcoding system

### System Highlights:

- Unique Smart Canisters can be used in conjunction with standard canisters. Smart Canisters automatically update the medication database, allowing canisters to be placed in any available location within a designated Smart Drawer.
- Batch filtering allows the user to filter in/out data based on various patient-specific criteria. This feature provides greater flexibility in overall batch management prior to dispensing.
- Add a second packaging sub-unit to ensure you always operate at peak performance. Each sub-unit easily rolls in and out of the device, dramatically limiting downtime.
- Batch queuing improves workflow by enabling preparation of two batches at a time.
- The FastPak EXP uses UPS Class B packaging material for beyond-use dating of up to one year.
- The skip-med feature provides the ability to continue dispensing when a particular medication is depleted. Skipped medications are assigned to a separate batch to be dispensed later.
- A universal tray is available for slower-moving, odd-shaped or half-tablets; uses fill-to-light feature for accuracy.
- Flexible labeling options allow users to customize unit dose and multi-dose packaging.

### Specifications

#### FastPak EXP

**Oral Solid Canisters:** 310cc each, up to 320 total canisters (Optional) Smart Canisters-limitless

**Universal Tray:** 64 medications on board

#### Packaging Size:

43mm W x 60mm H (narrow)

74mm W x 55mm or 80mm H (standard)

**Package Printing:** Black

**Barcode Formats:** 39, 128 and PDF417

**Interfaces:** Flat files, HL7 messaging for ODBC transferred via diskette, on-line serial or Network Communications

**Dimensions:** 40" W X 31" D X 82 ¼" H (78" H upon delivery)

**Weight:** 1,103 lbs.

**Power Requirements:** 115VAC, 60Hz, 437W, 3.8 amps

### Components:

FastPak EXP  
Microsoft Windows<sup>®</sup> 2003 server with UPS  
Microsoft Windows<sup>®</sup> XP client with touch screen monitor, keyboard with mouse, and UPS  
AMS  
Universal Tray  
Laser Printer  
Cart  
Biometric reader

### Barcoding Station (Optional)

The Barcoding Station accurately and cost-efficiently barcodes all items not barcoded by the manufacturer. When the FastPak EXP is combined with the Barcoding Station, any size facility can achieve a complete barcode solution.

**Barcodes:** Linear: UPC-A, Code 39 and 128, RSS-14, RSS Limited 2D: RSS-14 Stacked, Aztec, DataMatrix

**Power Requirements:** 110VAC, 60Hz, 15 amps

### Replenishment Kit (Optional)

Barcode scanning verifies that the correct bulk oral solid medication is being added to the correct canister in the correct location. The scale determines average pieceweight of individual medications and stores this information in the database to automatically calculate subsequent canister replenishment. The scale is accurate to at least 99.5% and can be used as a stand-alone counter. The system integrates with AMS or ClinicWorks software.

**Components:** Counting scale, barcode scanner, all necessary connections.
