

A unique fulfillment solution designed for complex fulfillment challenges.

A Safer, More Efficient Workflow Process

Through cutting-edge automation and optimized process management, the OptiFill prescription fulfillment solution from AmerisourceBergen® enhances your pharmacy's workflow and overall operational efficiency. OptiFill can manage every aspect of your physical fulfillment process, from host system hand-off to order delivery. But more than that, it employs advanced validation and digital imaging processes that help ensure that every patient receives the right medication, at the right time – every time.

OptiFill is ideal for:

- Enabling a centralized processing model that reduces supply and service costs and streamlines replenishment of your hospital's automated dispensing cabinets (ADCs).
- Increasing hospital cost savings by providing pharmacy benefits to your employees and using OptiFill for the in-house fulfillment of these prescriptions.

No wonder it's the solution choice of more high volume pharmacies, processing more than 200 million prescriptions each year.

Powered by PPS Software

OptiFill harnesses the power of the PPS Management System, AmerisourceBergen's industry-leading software solution. This robust, highly configurable application integrates and manages all aspects of the fulfillment process – including barcode validation, automated oral solid filling, manual filling, checking, and packing, as well as inventory and order control and reporting.

In short, PPS is the key to the growth of your facility's pharmacy operations.

Flexible and Scalable

Looking to leverage your pharmacy to grow revenue through outpatient or employee scripts? Need to add another facility within your network? Ready to create efficiency through a hub-and-spoke distribution/central fill operation? Adding a new type of packaging to your capabilities for new markets? OptiFill has you covered.

OptiFill®

For Health Systems and Integrated Delivery Networks (IDNs)

With flexible PPS software and modular hardware used by many of the world's largest distribution operations, you can add or subtract components at any time. There is no better way to protect your technology investment while enabling your future business strategies.

More Time for Patients

With OptiFill managing your fulfillment processes, your pharmacy staff can devote more time to consulting with patients. And that is a prescription for greater staff and patient satisfaction.

With OptiFill, you have a full range of filling technology options, from fully-automated, to semi-automated, to manual. These include:

- **OF-2 Filling Unit:** Offers fully-automated labeling, filling, imaging and capping of oral solid medications. Ideal for mid-volume operations ranging from 800 to 3,500 scripts per shift. A typical OF-2 unit has either four or five dispensing cabinets with 128 canisters each.
- **FastFill® 220 Filling Unit:** Ideal for lower-volume pharmacies handling 500 to 1,500 scripts per shift. Additional units can be integrated to provide scalability to higher volumes, if needed.
- **FastPak® EXP Pouch Packaging Unit:** Provides a higher level of functionality in applications where unit dose capability is required. Ideal for centralized refill operations using automated dispensing cabinets such as AmerisourceBergen's MedSelect® units.
- **FastFill® 64 and QuickFill® Plus Units:** Supports lower levels of dispensing automation for specialized situations. FastFill 64 devices provide a secure dispensing option for controlled substances. QuickFill Plus units are ideal for difficult-to-automate classes of drugs such as antibiotics or potent compounds.

In addition, you can choose from multiple transport methods, including manual transport, standard conveyor, and "smart" conveyor capabilities. AmerisourceBergen professionals will help you design the right solution for your current requirements, and will be there to provide expert consulting when it is time to modify your system for future growth.

Optimize Your Future
