

OptiFill®

For VA and DOD Outpatient Pharmacies

The fulfillment solution that grows with your pharmacy.

A Safer, More Efficient Workflow Process

Through cutting-edge automation and optimized process management, the OptiFill prescription fulfillment solution from AmerisourceBergen® enhances your outpatient pharmacy's workflow and overall operational efficiency.

The solution manages every aspect of your physical fulfillment process, from host system hand-off to order delivery. But more than that, it employs advanced validation and digital imaging processes that help ensure that every patient receives the right medication with the shortest possible wait time. And, OptiFill's advanced security architecture simplifies compliance with evolving security directives, specifically those associated with DIACAP compliance.

No wonder it's the solution of choice of more high-volume pharmacies, processing more than 200 million prescriptions each year.

Powered by PPS Software

OptiFill harnesses the power of the PPS Management System, AmerisourceBergen's industry-leading software solution. This robust, highly-configurable application integrates and manages all aspects of the fulfillment process – including barcode validation, automated oral solid filling, manual filling, checking, packing, inventory control and reporting, as well as order control and reporting.

In short, PPS is the key to the growth of your pharmacy operations.

Flexible and Scalable

With flexible PPS software and modular hardware that is used by many of the world's largest distribution operations, you can add or subtract components at any time. There is no better way to protect your technology investment while enabling your future business strategies.

More Time for Patients

With OptiFill managing your fulfillment processes, your patient wait times are minimized and your pharmacists can devote more time to consulting. And that is a prescription for greater staff and patient satisfaction.

OptiFill®

For VA and DOD Outpatient Pharmacies

Your Choice of Filling Technologies

With OptiFill, you have a full range of filling technology options, from fully-automated, to semi-automated, to manual including:

- OF-2 Filling Unit: Offers fully-automated labeling, filling, imaging and capping of oral solid medications. A typical OF-2 unit has either four or five dispensing cabinets with 128 canisters each.
- FastFill® 220 Filling Unit: Ideal for lower-volume pharmacies handling 500 to 1,500 scripts per shift. Additional units can be integrated to provide scalability to higher volumes, if needed.
- FastFill® 64 and QuickFill® Plus Units: Support lower levels of dispensing automation for specialized situations. FastFill 64 devices provide a secure dispensing option for controlled substances. QuickFill Plus units are ideal for difficult-to-automate classes of drugs such as antibiotics or potent compounds.

In addition, you can choose from multiple transport methods, including manual transport, standard conveyor, and "smart" conveyor capabilities. AmerisourceBergen professionals will help you design the right solution for your current requirements, and will be there to provide expert consulting when it is time to modify your system for future growth.

Optimize Your Future
